
I still can't read any threads

Posted by Rdlouhy - 2007/10/27 20:35

All I get is this "An invalid post id was requested."

Not sure I understand the problem. Alls well here.

=====

View form in Flat not Threaded view.

Posted by NWLB - 2007/10/31 21:31

The problem seems to be linked to viewing the forums in the Threaded view, not the Flat view. When viewing the site in the Threaded view, it is coming into an error of some kind.

I've set the default viewing to Flat, but you can find an option to change the view next to the My Profile, if you are still seeing the Invalid post error.

The error, curiously, wasn't consistent, as you could still view some posts, some of the time. I'm working on locking down the glitch and will advise as things progress.

Sorry for the difficulties.
